

Feline Renal Function Questionnaire

Renal problems occur three times more frequently in cats than dogs but most do not show signs of chronic kidney disease until 75% of the kidneys have been damaged. Early detection is the key to helping your cat live a long and happy life.

Is your cat over seven? Yes No

Does your cat display any of the following signs?

Eating less than usual Yes No

Signs of weight loss Yes No

Passing more urine
(larger volume or the same volume more often) Yes No

Drinking more than usual Yes No

Sleeping more Yes No

Vomiting Yes No

If you have answered yes to one or more of these questions please book an appointment with your vet for a urine/blood test and general check up.

Even if you have answered no, routine checking of your older cat's urine can help detect the early signs of kidney problems. Book an appointment with your veterinary nurse for a **FREE** Senior Club appointment to find out more.
